

Attn: John,

Just a note to let you know that we are very pleased with your water machine. We put 1000 gallons of treated water into a city waste lagoon. This lagoon stunk and was considered dead. In twenty four hours, the smell was virtually gone. Now that's amazing!!!

Sincerely,

Carl D. Schneider  
Vice-President

7-9-03

I was introduced to Carl Schneider with Tech Ag. Carl indicated he could help with the Town's lagoon problem. He recommended we add Bio Water (H2O Plus), to boost the oxygen in the water and BF 888 to help jump start the aquatic life (bacteria) in the lagoon. We went from a 0 reading, to a reading of 4 within 3 days, which allowed us to start discharging. We believe the problem is stemming from nearby insecticide application, but we can control it with the help of the BF 888. We are on a maintenance program of one 5-gallon bucket of BR 888 per week. An added bonus by using the BF 888 came when we did a sludge test. The Town has not done anything as far as dredging or any other type of sludge removal to its lagoons. After using the product 6 weeks we noticed a 30% reduction in the sludge depth from the prior readings. After checking into dredging the 5 1/2 acre lagoon, the Town could save up to \$150,000 in dredging costs.

I feel that the BF 888 and Bio Water was a lifesaver for the Town of Lasalle in both allowing us to operate, and the money saved can't be tallied. Although this was an unbudgeted item, it was one of those things that had to be done. The expenditure is worth it to keep from paying fines of up to \$10,000 a day from the State. Not having to dredge the lagoon after 37 years in operation made this an easy decision.

I would strongly recommend any municipality with a lagoon system to take a look at this. It's doing a good job for us. If you have any questions, please don't hesitate to call our office.

Sincerely,

*Barry Schaeffer*
